

WebCollect Payment Platform

www.globalcollect.com

WebCollect opens the door to global online payment processing, enabling your consumers all over the world to pay for their purchases in the easiest and most user-friendly way!

With WebCollect you can collect local payment methods and currencies in over 200 countries on your website. Payment methods include:

- international and national cards
- direct debits
- real-time bank transfers
- bank transfers
- cash payment
- eWallets
- prepaid methods
- bill payment
- checks

GlobalCollect's vast experience in the payment industry and extensive worldwide banking network has resulted in the best payment platform available today. WebCollect is an online payment platform that once integrated, allows you to accept hundreds of currencies and local payment methods.

The strength of integrating with the WebCollect payment platform is that it gives you the ability to offer your customers the option to pay for their purchase with the largest choice of payment methods. This includes the local payment methods that are preferred in their country.

How does it work?

Merchants who integrate their online shop with the WebCollect payment platform enjoy access to the full payment portfolio. Once you are connected to WebCollect you can offer hundreds of currencies and payment methods on your site, and every GlobalCollect merchant has 24 hour and 7 day a week access to the online PaymentConsole.

What is the payment process?

Shoppers visit the merchant's online shop to purchase goods (digital or physical), progress through the shopping cart and when completing their payment - choose from available payment methods on the WebCollect Platform. WebCollect then does all of the work behind the scenes with the payment processing.

Simple, fast, and secure!

How do you integrate with WebCollect?

Connecting to this powerful payment platform engine is simple! One of our 3 available Integration Methods is guaranteed to fit with your needs. We offer a fast connect to hosted payment pages, an XML API connection, and call center specific application. There are four distinct ways that you can connect to the WebCollect payment platform for online payment processing. No matter what you need, one of these is guaranteed to fit:

MerchantLink Integration

The MerchantLink WebCollect connection method is designed for merchants who prefer to use their own online shop with their own payment pages. The merchant collects and stores its customers' payment details. This integration consists of a single XML interface to WebCollect, which opens the door for you to offer the wide range of GlobalCollect payment methods.

CustomerLink Integration

The CustomerLink WebCollect connection method was designed for merchants who want "ready to use" payment pages for their online shop. CustomerLink is fully hosted by GlobalCollect, easy to implement, and the payment pages are entirely customized to the look and feel of your website. The hosted payment pages provide payment instructions in 12 different languages, increasing your customers' comfort and trust.

Call Center Application

This connection is also known as a Virtual Terminal. Every Call Center terminal will have real-time access to our WebCollect payment server, offering credit card and direct debit payment methods with a minimum number of keystrokes. Merchants can log on with their own merchant-id, username, and password. Additional security checks are performed to confirm configured data. The virtual terminal determines credit card type and creates a unique order-id accordingly. The Merchant can optionally add their own payment reference number.

What is the PaymentConsole?

The PaymentConsole is your KEY to payment management and reporting. This online interface provides you with a large variety of merchant services and reporting tools. No matter which connection API you choose to integrate with WebCollect, you will have unlimited access to this online tool. Features include:

- Graphical overview of daily orders and statistics

- Views and extracts reports
- Instantly retrieved transactions
- Payment status and full details
- Order queries
- Documentation download access
- Maintenance and system notifications

In addition to the reporting functions, the PaymentConsole provides you with full payment management. You can even export queries and reports into Microsoft Excel!
